

Mental Health, & Child Development

3rd biennial, international conference on:

**BRAIN DEVELOPMENT & LEARNING:  
MAKING SENSE OF THE SCIENCE**

July 16-20, 2010 Hyatt Hotel, Vancouver, BC Canada

Conference Website: <http://www.interprofessional.ubc.ca/bdl.html>

A terrific conference on cutting-edge research in Neuroscience, Mental Health, & Child Development

This interdisciplinary conference is for anyone who cares deeply about children.

It is for educators, clinical psychologists, social workers, school guidance counselors, pediatricians, etc. and provides an opportunity to learn about important scientific discoveries from some of the finest scientists around the world -- the scientists who made the discoveries -- in ways that are accessible and that you can see the direct relevance of and use.

Unlike most other conferences, it is not for scientists to talk to one another. Nor does it "dumb down" the science or have interpreters far removed from the actual research -- yet the work is fully understandable to educators and clinicians.

People LOVED our previous 2 meetings and gave them a 98% approval rating.

past comments include:

"The speakers are exceptional, the organization of the conference supreme, the spirit of the whole conference is great; this is the best conference I ever attended."

"The broad scientific base combined with clinical relevance was terrific!"

"I've gained knowledge and passion."

"What I liked especially was the welcoming attitude to different professionals, students and parents.. the sensitivity to learning and attention to participants' needs; the passion of the organizers."

**\*\* EARLY BIRD DISCOUNTS END SOON - JAN. 31, 2010 \*\***

**\*\* SCHOLARSHIPS of 50% off are available \*\*\***

Continuing Education Credits available for Canada and the US.

>Late Registration fees kick in after June 1.
